

Illinois Society Of Periodontists

2012 Fall Meeting

Please join us for the ISOP's fall session featuring:

Dr. Giovanni Zucchelli

Topic: Soft Tissue Plastic Surgery to Improve Esthetics Around Teeth and Implants

Date: Friday, December 7, 2012

Place: Doubletree Hotel Oak Brook
1909 Spring Road Oak Brook, IL

****The Doubletree Oakbrook location will be used for the January & April meetings***
A block of rooms will be made available for those needing overnight accommodations.
For room reservations, please call 630.472.6000 and ask for the IL Society of Periodontists event.*

Time: 7:30am — 4pm

Giovanni Zucchelli, DDS, PhD
Professional Biography

Doctor in Dentistry
Professor of Periodontology from Bologna University
PhD in Medical Biotechnology applied to Dentistry
Italian Society of Periodontology, member
European Federation of Periodontology, member
Member of the Editorial Board of the European Journal of Esthetic Dentistry
Winner of scientific papers for research in Periodontology in Europe & USA
Authors of scientific publications in the fields of Periodontology
Author of 2 text books on soft tissue plastic surgery

Join us for a full day with one of the worlds best periodontal surgeons

ISOP

Board of Directors

George A. Mandelaris, DDS, MS
President

Roger Nouneh, DMD, MS
President-Elect

Tricia Crosby, DDS, MS
Treasurer

Devang Thakkar, DDS, MS
Secretary

Yetta McCullom, DDS, MS
Senior Board Member

David Wright, DDS
Junior Board Member

Kirk Nourian, DDS, MS
Immediate Past President

Roger Nouneh, DMD, MS
State and Regional Assembly
Representative

Sponsored by:

Soft Tissue Plastic Surgery to Improve Esthetics Around Teeth and Implants

Dr. Giovanni Zucchelli

Friday December 7, 2012

Seminar Description

The treatment of gingival recession has become a main component of the contemporary periodontal practice. Esthetic demands to cover exposed root surfaces is a primary indication for root coverage surgery. Affected areas are often times not limited just limited to a single tooth, but a sextant of teeth. In order to minimize the number of surgical events and to optimize the aesthetic result, all the contiguous recession defects should be treated at the same operation. A new approach of the coronally advanced flap has been used to treat multiple recession defects affecting adjacent teeth in patients with high aesthetic demands. This surgical technique has been demonstrated to achieve complete root coverage in all affected areas. These outcomes can and must be maintained long term if they are to have enhanced value by the patient and referring colleague. Treatment planning and surgical techniques for patients with gingival recession and high aesthetic demands will be presented.

Main goals to be achieved:

- Treatment of multiple recession defects in the same surgical intervention
- The use of the soft tissue to manage recession defects and achieve root coverage
- How to change white anatomy when complete root coverage is not achievable
- How to obtain good color blending of the surgical treated areas with the adjacent soft tissue
- How to increase the apical coronal dimension of buccal keratinized tissue
- How to increase the thickness of soft tissue when necessary
- To discuss factors influencing the selection of the surgical technique in a complex case
- Case presentations

The recession of the buccal soft tissue margin is also a frequent complication of dental implants. The appearance of metallic structure or even their transparency through the thin buccal soft tissues are the most common reasons for patient aesthetic complains. Soft tissue plastic surgical procedures and, bi-laminar techniques in particular, can be successfully used to treat buccal gingival recessions around dental implants as well as to increase the thickness of buccal soft tissue before implant installation.

A significant part of the presentation will be devoted to soft tissue management around implant sites.

Friday, December 7, 2012

Program Agenda

Dr. Giovanni Zucchelli *Soft Tissue Plastic Surgery to Improve Esthetics Around Teeth & Implants*

8am - 4pm Continental Breakfast, Lunch and Afternoon snacks provided

Diagnosis and Treatment Planning

- Altered passive eruption: diagnosis and surgical treatment
- Diagnosis and prognosis of root coverage
- Predetermination of root coverage
- Combined restorative-periodontal treatment for the aesthetic goal
- Discussion

Surgical treatment of single type recession defect

- Coronally advanced flap
- Laterally moved flap
- Connective tissue graft harvesting techniques
- Bilaminar techniques
- Free gingival graft-two step approach
- Video of the surgical procedures
- Discussion

Surgical treatment of multiple recession defect

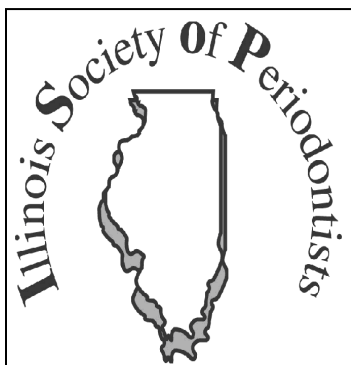

- Coronally advanced flap
- Bi-laminar techniques
- Combined techniques

Treatment of cervical abrasion defects associated with gingival recession: selection of the most appropriate treatment
The use of substitutes of connective tissue graft in the treatment of gingival recessions

Treatment of gingival recession around implants

- Video of the surgical procedures
- Discussion

ISOP December 7, 2012 All Day Program Registration Form

Name: _____

Address: _____

Phone: _____

E-mail: _____

Free of Charge with
Paid 2012 Dues of \$150.00
Non ISOP Periodontists: \$150

Remit form or email to Dr. Devang Thakkar, ISOP Secretary

FAX: 708-460 4380

E-Mail: drdthakkar@yahoo.com

SAVE THE DATES

Thursday, February 21, 2013

Dr. Nancy Newhouse. An update from the AAP President.

6:30pm–8:30pm. Maggiano's, Downtown Chicago.

The ISDP will be honoring Dr. Ken Krebs for his years of service to our profession this evening

Friday, January 18, 2013

Dr. Brian Mealey. Periodontitis: What are you telling your patients?

A collaborative conference on the management of periodontitis with our restorative doctors and hygienists.

8am–4pm. DoubleTree Hotel. Oakbrook, IL.

Friday, April 26, 2013

Dr. Maurizio Tonetti. The Changing Role of the Periodontist

8am–4pm. DoubleTree Hotel. Oakbrook, IL.
